1.0 GENERAL DESCRIPTION

1.1 Introduction

HG173FH002G01 is a color active matrix TFT LCD module using amorphous silicon TFT's (Thin Film Transistors) as an active switching devices. This module has a 17.3 inch diagonally measured active area with Full-HD resolutions (1920 horizontal by 1080 vertical pixel array). Each pixel is divided into RED, GREEN, BLUE dots which are arranged in vertical stripe and this module can display 16.7M(8bit) colors and color gamut SRGB100%. The TFT-LCD panel used for this module is a low reflection and higher color type. Therefore, this module is suitable for Notebook PC. The LED driver for back-light driving is built in this model.

All input signals are eDP1.2 interface compatible.

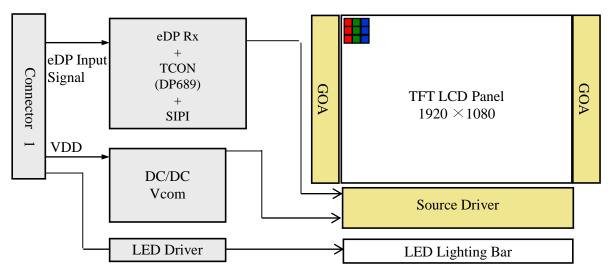

Figure 1. Drive Architecture

1.2 Features

- 2 lane eDP interface with 2.7 Gbps link rates
- Thin and light weight
- 16.7M(8bit) color depth, color gamut SRGB 100%
- Single LED lighting bar (Bottom side/Horizontal Direction)
- Data enable signal mode
- Side mounting frame
- Green product (RoHS & Halogen free product)
- On board LED driving circuit
- On board EDID chip

1.3 Application

• Notebook PC (Wide type)

1.4 General Specification

The followings are general specifications at the model HG173FH002G01 (listed in Table 1) <Table 1. General Specifications>

| Parameter | Specification | Unit | Remarks |
|---------------------|---|--------|---------|
| Active area | 381.89(H) ×214.81(V) | mm | |
| Number of pixels | 1920 (H) ×1080 (V) | pixels | |
| Pixel pitch | 198.9(H) ×198.9(V) | um | |
| Pixel arrangement | RGB Vertical stripe | | |
| Display colors | 16.7M(8bit) | | |
| Color gamut | 100%typ.95%min. | | sRBG |
| Display mode | Normally Black | | |
| Dimensional outline | 442.10(H) ±0.3 ×267.50(V)±5.1 (W PCB) | mm | |
| Weight | 500(max) | g | |
| Surface treatment | AG | | |
| Surface hardness | 3Н | | |
| Back-light | Bottom edge side, 1-LED lighting bar type | | Note 1 |
| | $P_{\rm D}$: 0.85 (Max) | W | @Mosaic |
| Power consumption | P _{BL} : 12 (TYP) | W | |
| | P _{Total} : 13 (TYP) | W | @Mosaic |

Notes : 1. LED Lighting Bar (60*LED Array)

HG173FH002G01

2.0 ABSOLUTE MAXIMUM RATINGS

The followings are maximum values which, if exceed, may cause faulty operation or damage to the unit. The operational and non-operational maximum voltage and current values are listed in Table 2.

| Parameter | Symbol | Min. | Max. | Unit | Remarks |
|-----------------------|-----------------|----------------------|----------------------|------|---------|
| Power Supply Voltage | V _{DD} | -0.3 | 5.5 | V | Note 1 |
| Logic Supply Voltage | V _{IN} | V _{ss} -0.3 | V _{DD} +0.3 | V | Note 1 |
| Operating Temperature | T _{OP} | 0 | +50 | °C | Note 2 |
| Storage Temperature | T _{ST} | -20 | +60 | °C | Note 2 |

< Table 2. Absolute Maximum Ratings>

 $Ta=25+/-2^{\circ}C$

Notes :

1. Permanent damage to the device may occur if maximum values are exceeded functional operation should be restricted to the condition described under normal operating conditions.

2. Temperature and relative humidity range are shown in the figure below.

95 % RH Max. (40 °C \geq Ta) Maximum wet - bulb temperature at 39 °C or less. (Ta > 40 °C) No condensation.

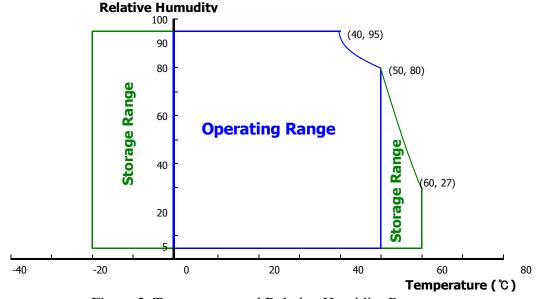

Figure 2. Temperature and Relative Humidity Range

3.0 ELECTRICAL SPECIFICATIONS

3.1 Electrical Specifications

| < Tab | < Table 3. Electrical Specifications > | | | | | | | |
|----------------------------------|--|------|------|------|------|--------------------|--|--|
| Parameter | | Min. | Тур. | Max. | Unit | Remarks | | |
| Power Supply Voltage | V _{DD} | 3.0 | 3.3 | 3.6 | V | Note 1 | | |
| Permissible Input Ripple Voltage | V _{RF} | - | - | 660 | mV | @ $V_{DD} = 3.3 V$ | | |
| Power Supply Current | I _{DD} | - | 258 | 606 | mA | Note 1 | | |
| Power Supply Inrush Current | Inrush | - | - | 2 | А | Note3 | | |
| | P _D | - | 0.85 | 2.0 | W | Note 1 | | |
| Power Consumption | P _{BL} | - | 12 | - | W | Note 2 | | |
| | P _{total} | - | 13 | - | W | Note 1 | | |

Notes :

- 1. The supply voltage is measured and specified at the interface connector of LCM.
 - The current draw and power consumption specified is for 3.3V at 25 $^\circ\text{C}.$
 - a) Typ : Mosaic pattern 8*8
 - b) Max : H1 line 255 patterns

Figure 3. Power Measure Patterns

- 2. Calculated value for reference (VLED \times ILED)

| Level Low Level | | | 0 | - | 0.6 | V | |
| PWM Control Frequency | | F _{PWM} | 200 | - | 10,000 | Hz | |
| Duty Ratio | | | 5 | - | 100 | % | Note 3 |

Notes :

1. Power supply voltage 12V for LED driver.

Calculator value for reference IF \times VF \times 60 /driver efficiency = PLED

- 2. The LED life-time define as the estimated time to 50% degradation of initial luminous.
- 3. 5% duty cycle is achievable with a dimming frequency less than 1KHz.
- 4. Measure condition (Figure 5)

4.0 OPTICAL SPECIFICATION

4.1 Overview

The test of optical specifications shall be measured in a dark room (ambient luminance ≤ 1 lux and temperature = $25\pm2^{\circ}$ C) with the equipment of luminance meter system (Goniometer system and TOPCON BM-5) and test unit shall be located at an approximate distance 50cm from the LCD surface at a viewing angle of θ and Φ equal to 0°. We refer to $\theta \emptyset = 0$ (= $\theta 3$) as the 3 o'clock direction (the "right"), $\theta \emptyset = 90$ (= $\theta 12$) as the 12 o'clock direction ("upward"), $\theta \emptyset = 180$ (= $\theta 9$) as the 9 o'clock direction ("left") and $\theta \emptyset = 270$ (= $\theta 6$) as the 6 o'clock direction ("bottom"). While scanning θ and/or \emptyset , the center of the measuring spot on the display surface shall stay fixed. The backlight should be operating for 30 minutes prior to measurement. VDD shall be 3.3+/-0.3V at 25°C. Optimum viewing angle direction is 6 'clock.

4.2 Optical Specifications

<Table 5. Optical Specifications>

Notes :

- 1. Viewing angle is the angle at which the contrast ratio is greater than 10. The viewing angles are determined for the horizontal or 3, 9 o'clock direction and the vertical or 6, 12 o'clock direction with respect to the optical axis which is normal to the LCD surface (see Figure 7).
- 2. Contrast measurements shall be made at viewing angle of $\Theta = 0$ and at the center of the LCD surface. Luminance shall be measured with all pixels in the view field set first to white, then to the dark (black) state . (see Figure 7) Luminance Contrast Ratio (CR) is defined mathematically.

CR = Luminance when displaying a white raster Luminance when displaying a black raster

- 3. Center Luminance of white is defined as luminance values of 5 point average across the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in Figure 8 for a total of the measurements per display.
- 4. The White luminance uniformity on LCD surface is then expressed as : $\Delta Y =$ Minimum Luminance of 5(or 13) points / Maximum Luminance of 5(or 13) points.(see Figure 8 and Figure 9).
- 5. The color chromaticity coordinates specified in Table 5 shall be calculated from the spectral data measured with all pixels first in red, green, blue and white. Measurements shall be made at the center of the panel.
- 6. The electro-optical response time measurements shall be made as Figure 10 by switching the "data" input signal ON and OFF. The times needed for the luminance to change from 90% to 10% is T_f, and 10% to 90% is T_r.
- 7. Cross-Talk of one area of the LCD surface by another shall be measured by comparing the luminance (YA) of a 25mm diameter area, with all display pixels set to a gray level, to the luminance (YB) of that same area when any adjacent area is driven dark. (See Figure 11).

4.3 Optical Measurements

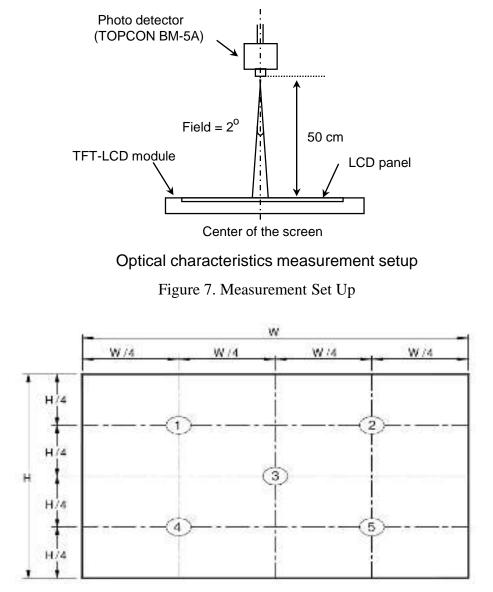

Figure 8. White Luminance and Uniformity Measurement Locations (5 points)

Center Luminance of white is defined as luminance values of center 5 points across the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in Figure 7 for a total of the measurements per display.

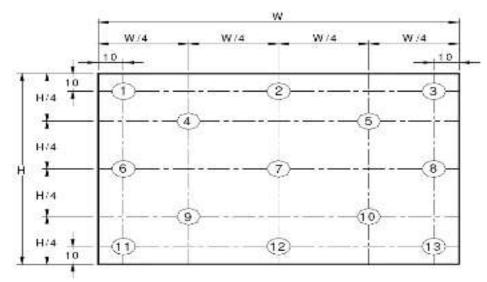

Figure 9. Uniformity Measurement Locations (13 points)

The White luminance uniformity on LCD surface is then expressed as : $\Delta Y5 =$ Minimum Luminance of five points / Maximum Luminance of five points (see Figure 8), $\Delta Y13 =$ Minimum Luminance of 13 points /Maximum Luminance of 13 points (see Figure 9).

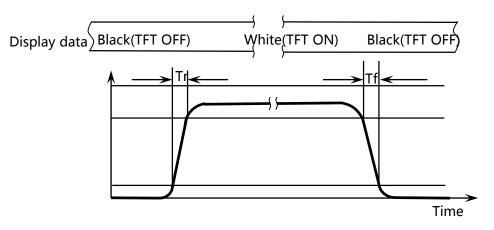

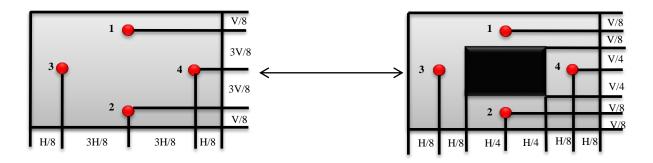

Figure 10. Response Time Testing

The electro-optical response time measurements shall be made as shown in Figure 10 by switching the "data" input signal ON and OFF. Tr: The luminance to change from 10% to 90%, Tf: The luminance to change from 90% to10%.

The test system : Goniometer system and TOPCON BM-5

Cross Talk (%) =
$$\left| \frac{\mathbf{Y}_{B} - \mathbf{Y}_{A}}{\mathbf{Y}_{A}} \right| \times 100$$

Figure 11. Cross Talk Modulation Test Description

Where:

 Y_A = Initial luminance of measured area (cd/m²)

 $Y_B =$ Subsequent luminance of measured area (cd/m²)

The location 1/2/3/4 measured will be exactly the same in both patterns. The test background gray is from L64 to L192. Take the largest data as the result.

Cross Talk of one area of the LCD surface by another shall be measured by comparing the luminance (YA) of a 25mm diameter area, with all display pixels set to a gray level, to the luminance (YB) of that same area when any adjacent area is driven dark.(Refer to Figure 11) The test system: Goniometer system and TOPCON BM-5

5.0 INTERFACE CONNECTION

5.1 Electrical Interface Connection

The electronics interface connector is MSAK24025P30. The connector interface pin assignments are listed in Table 6.

<Table 6. Pin Assignments for the Interface Connector>

| Terminal | Symbol | Functions | | |
|----------|---------------|---------------------------------------|--|--|
| Pin No. | Symbol | Description | | |
| 1 | NC | No Connect | | |

HG173FH002G01

8.0 POWER SEQUENCE

To prevent a latch-up or DC operation of the LCD module, the power on/off sequence shall be as shown in below.

Notes:

1. When the power supply VDD is 0V, keep the level of input signals on the low or keep high impedance. 2. Do not keep the interface signal high impedance when power is on. Back Light must be turn on after power for logic and interface signal are valid.

9.0 Connector Description

Physical interface is described as for the connector on LCM. These connectors are capable of accommodating the following signals and will be following components.

9.1 TFT LCD Module

| < Table 11. Signal | Connector | > |
|--------------------|-----------|---|
|--------------------|-----------|---|

| Connector Name /Description | For Signal Connector |
|-----------------------------|----------------------|
| Manufacturer | STM |
| Type/ Part Number | MSAK24025P30 |
| Mating housing/ Part Number | IPEX 20455-030E |

10.0 MECHANICAL CHARACTERISTICS

10.1 Dimensional Requirements

Figure 20 shows mechanical outlines for the model HG173FH002G01.Other parameters are shown in Table 12.

| Parameter | Specification | Unit |
|---------------------|--|--------|
| Active Area | 381.89 (H) ×214.81 (V) | mm |
| Number of pixels | 1920 (H) X 1080 (V) (1 pixel = R + G + B dots) | pixels |
| Pixel pitch | 198.9 (H) ×198.9(V) | um |
| Pixel arrangement | RGB Vertical stripe | |
| Display colors | 16.7 M(8bit) | |
| Display mode | Normally Black | |
| Dimensional outline | $389.89(H) \pm 0.3 \times 238.31(V) \pm 0.5$ (W PCB) | mm |
| Weight | 500(max) | g |

<Table 12. Dimensional Parameters>

10.2 Mounting

See Figure 20.

10.3 Glare and Polarizer Hardness.

The surface of the LCD has an anti-glare coating and hard coating .

10.4 Light Leakage

There shall not be visible light from the back-lighting system around the edges of the screen as seen from a distance 30-35cm from the screen with an overhead light level of 150-200lux.

11.0 RELIABILITY TEST

The reliability test items and its conditions are shown in below. <Table 13. Reliability Test>

| No | Test Items | Conditions | | | | | |
|----|---|---|--|--|--|--|--|
| 1 | High temperature storage test | $Ta = 60 \ ^{\circ}C, 240 \ hrs$ | | | | | |
| 2 | Low temperature storage test | Ta = -20 °C, 240 hrs | | | | | |
| 3 | High temperature/High humidity Storage | $Ta = 50 \ ^{\circ}C$, 80% RH, 240 hrs | | | | | |
| 4 | High temperature operation test | $Ta = 50 \ ^{\circ}C, 240 \ hrs$ | | | | | |
| 5 | Low temperature operation test | $Ta = 0^{\circ}C$, 240 hrs | | | | | |
| 6 | Thermal Shock Storage | Ta = -20 °C \leftrightarrow 60 °C (0.5 hr), 100 cycle | | | | | |
| 7 | Shock test | 220G, 2ms, Half sine | | | | | |
| / | (non-operating) | $\pm X, \pm Y, \pm Z$ once each direction | | | | | |
| 8 | Declarge Vibration test | 10-500hz, 1.5G,half sine,X,Y,Z/sweep | | | | | |
| 0 | Package Vibration test | 60min | | | | | |
| | | Power OFF: | | | | | |
| | | Air discharged +/- 15kV Criteria C | | | | | |
| | Electric static dischange test | Contact discharged +/- 8kV Criteria C | | | | | |
| 9 | Electro-static discharge test | Power ON: | | | | | |
| | | Air discharged +/- 10kV Criteria B | | | | | |
| | | Contact discharged +/- 6kV Criteria B | | | | | |

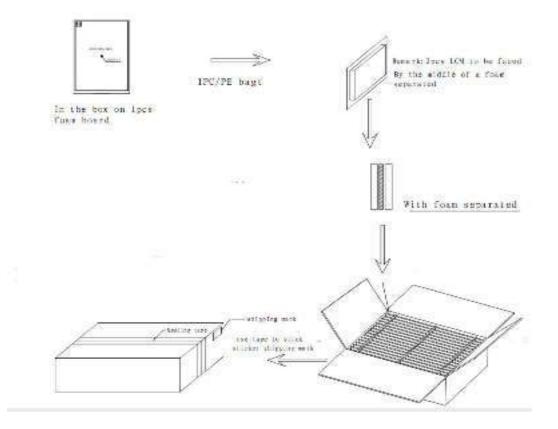

12.0 HANDLING & CAUTIONS

- (1) Cautions when taking out the module
 - Pick the pouch only, when taking out module from a shipping package.
- (2) Cautions for handling the module
 - As the electrostatic discharges may break the LCD module, handle the LCD module with care. Peel a protection sheet off from the LCD panel surface as slowly as possible.
 - As the LCD panel and back light element are made from fragile glass material, impulse and pressure to the LCD module should be avoided.
 - As the surface of the polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
 - Do not pull the interface connector in or out while the LCD module is operating.
 - Put the module display side down on a flat horizontal plane.
 - Handle connectors and cables with care.
- (3) Cautions for the operation
 - When the module is operating, do not lose CLK, ENAB signals. If any one of these signals is lost, the LCD panel would be damaged.
 - Obey the supply voltage sequence. If wrong sequence is applied, the module would be damaged.

- (4) Cautions for the atmosphere
 - Dew drop atmosphere should be avoided.
 - Do not store and/or operate the LCD module in a high temperature and/or humidity atmosphere. Storage in an electro-conductive polymer packing pouch and under relatively low temperature atmosphere is recommended.
- (5) Cautions for the module characteristics
 - Do not apply fixed pattern data signal to the LCD module at product aging.
 - Applying fixed pattern for a long time may cause image sticking.
- (6) Other cautions
 - Do not disassemble and/or re-assemble LCD module.
 - Do not re-adjust variable resistor or switch etc.
 - When returning the module for repair or etc. Please pack the module not to be broken. We recommend to use the original shipping packages.
